

# Seymour Public Schools Curriculum

## Subject Title : **Introduction to Forensics**

### **COURSE DESCRIPTION:**

***Introduction to Forensics* explores the various scientific applications forensic scientists use to solve problems. Students will assume the various roles of crime scene investigator, scientist, and medical examiner in order to collect and evaluate evidence in a problem solving environment. Students will focus on making connections between science and technology and their impact on our daily lives. The study of forensics utilizes scientific reasoning to explore the analysis of fingerprints, bodily fluids, DNA, firearms and ballistics, arson and explosives, natural and synthetic fibers, documents, glass fragments, and case studies.**

### **INTERDISCIPLINARY RELATIONSHIPS:**

**Forensics is a diverse field and rarely are forensic scientists “generalists” – people who specialize or are experts in ALL aspects of forensic science and forensic investigations. Forensic experts usually specialize in one or two branches of forensic investigations. The purpose of this course is to introduce students to the general branches of forensic investigations. Because forensic science is an applied scientific discipline, the student’s success will require them to apply knowledge from many branches of science, including physics, chemistry, and biology, social science, including civics and the law, math, reading, writing, and communication.**

**The ultimate goal is for students to become confident that they can evaluate a solution to a complex, real-world situation/problem utilizing scientific knowledge, numerical data, evidence, prioritized criteria, and logical reasoning.**

<b>Grade:</b> 10-12	<b>Subject:</b> Serology (Blood typing and pattern analysis)
<b>Time Frame:</b>	
<b>CSDE/NGSS/CCSS Standard</b>	<p><b>D INQ.1 – Identify questions that can be answered through scientific investigation.</b></p> <p><b>D INQ 3 - Formulate a testable hypothesis and demonstrate logical connections between scientific concepts guiding the hypothesis and the design of the experiment.</b></p> <p><b>D INQ. 4 – Design and conduct appropriate types of scientific investigations to answer different questions.</b></p> <p><b>D INQ. 6. – Use appropriate tools and techniques to make observations and gather data.</b></p> <p><b>D INQ. 7. – Assess the reliability of the data that was generated in the investigation.</b></p> <p><b>D INQ. 9. – Articulate conclusions and explanations based on research data, and assess results based on the design of the investigation.</b></p> <p><b>D INQ.10 – Communicate about science in different formats, using relevant science vocabulary, supporting evidence and clear logic.</b></p> <p><b>HS-ETS1-3. – Engineering Design: Evaluate a solution to a complex real-world problem based on prioritized criteria and trade-offs that account for a range of constraints, including cost, safety, and reliability...as well as possible social, cultural, and environmental impacts. (NGSS)</b></p> <p><b>RST.11-12.7 – Integrate and evaluate multiple sources of information presented in diverse formats in order to address a question or solve a problem. (CCSS – ELA/Literacy)</b></p> <p><b>RST.11-12.9 – Synthesize information from a range of sources into a coherent understanding of a process, phenomenon, or concept, resolving conflicting information when possible. (CCSS - ELA/Literacy)</b></p>
<b>SHS Learning Expectations</b>	<ol style="list-style-type: none"> <li>1. Students will think critically.</li> <li>2. Students will communicate effectively and creatively.</li> <li>3. Students will access, evaluate, and use information for a variety of tasks and purposes.</li> </ol>
<b>Enduring Understanding</b>	Information/evidence from a crime scene must be collected in a careful, systemic, scientific, and legal way.
<b>Essential Questions</b>	<ol style="list-style-type: none"> <li>1. How can blood evidence be used to make interpretations and inferences?</li> <li>2. How is known data used to determine and compare the qualities of unknown data?</li> </ol>

# Seymour Public Schools Curriculum

<b>Priority Standards:</b>	<i>See Standards above</i>		
<b>Performance Expectations (Student outcomes)</b>	<ul style="list-style-type: none"> <li>• SWBAT determine whether a stain is blood.</li> <li>• SWBAT determine the blood type of a simulated blood stain/sample using the ABO/Rh system.</li> <li>• SWBAT EXPLORE bloodstain patterns as a function of velocity, direction, and height of fall.</li> <li>• SWBAT use blood spatter evidence to recreate the events at a crime scene.</li> </ul>		
<b>Strategies/Modes (examples)</b>	<b>Materials/Resources (examples)</b>	<b>Assessments (examples)</b>	
<ul style="list-style-type: none"> <li>• Cooperative group investigations/research</li> <li>• Virtual/Actual laboratory explorations</li> <li>• Powerpoint lecture/discussion (to be utilized as a review of the concepts cooperatively explored by the students)</li> <li>• Research/writing assignments.</li> <li>• Organization of a class/lab notebook to be utilized throughout the semester course.</li> <li>• Case Study Analysis</li> <li>• Checkpoint questions</li> <li>• Performance Assessments</li> <li>• Formative/Summative Assessments throughout unit</li> </ul>	<ul style="list-style-type: none"> <li>• <b>TEXTBOOK: <i>Forensic Science for High School</i></b>, by Barbara Ball-Seslich and John Funkhouser.
